Mitogen-Nil	NEGATIVE	=> 0.5	IU/ml
QuantiFERON Result	NEGATIVE	NEGATIVE	

Assay Performance Explanation

QuantiFeron-TB Gold Plus is an Interferon Gamma Release Assay (IGRA) which measures a person's immune-system reaction to TB bacteria. Four color coded tubes are prepared from a single green top tube that the lab has received for testing as follows:

NIL TUBE (GRAY): Used to determine if patient has preexisting immune response which could cause false-positive reading.

MITOGEN TUBE (LAVENDER): Control tube used to assure that the patient has a healthy immune status, also serves as control for blood handling and incubation.

TB ANTIGEN 1 TUBE (GREEN): This tube is coated with the M.tuberculosis specific antigen 1.

TB ANTIGEN 2 TUBE (YELLOW): This tube is coated with the M.tuberculosis specific antigen 2.

The values of this tubes minus the NIL tube (along with other factors) determine the final result.

Evaluation of this final test result should be done in combination of each individual's epidemiological history, current medical status, and other diagnostic tests.

Recommended guidance can be obtained at: www.cdc.gov/nchstp/tb1/
